Cairo, Egypt

EDUCATION

The British University in Egypt (BUE) Sep 2021 - Sep 2026
BSc Computer Science - Software Engineering
Affiliated with London South Bank University

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, C++, SQL, HTML, CSS
Frontend: React, TypeScript, Tailwind CSS, Vite
Backend & Databases: Node.js, Express, MongoDB, MongoDB Atlas, job queues, REST APIs, JWT
Testing & Performance: Selenium WebDriver, TestNG, Cucumber, Gherkin, Vitest, Supertest, JUnit 5, integration testing, K6
Tools & AI: Git, GitHub, Vercel, Render, Cloudinary, Postman, OpenAI API (GPT-4, GPT-Image), Prompt Engineering

PROJECTS

ComicMind - AI Comic Generation Platform 2025-2026
React, TypeScript, Node.js, Express, MongoDB, Vitest, OpenAI API, Cloudinary

- **Achieved** 100% user satisfaction for generated image quality and 100% recommendation rate in a structured user evaluation by building an AI comic-generation pipeline with consistent character prompting and OpenAI GPT-Image. Maintained character consistency across generated images, preventing appearance drift between panels.
- **Prevented** lost work after closed tabs or restarts by implementing a durable MongoDB-backed job queue that resumes in-flight comic generation.
- **Validated** recovery from real failures with integration tests that terminate the worker mid-generation and close the client tab against a live MongoDB instance.
- **Recorded** 0% failed requests and ~118 ms average API response time under concurrent load in K6 benchmarks of the Node.js/Express API.
- **Improved** comic retrieval by adding targeted MongoDB indexes, shifting query execution from COLLSCAN to IXSCAN.

Glassdoor Web Application- Automated Testing
Java, Selenium WebDriver, TestNG, Cucumber, Gherkin

- **Developed** automated UI tests for job search, company reviews, and employer overview features using Selenium WebDriver, Java, and TestNG.
- **Created** positive and negative test scenarios and implemented BDD workflows using Cucumber/Gherkin.
- **Structured** test cases with preconditions, test data, expected results, and alternative paths.

Game Discovery Platform 2025
React, Node.js, Express, MongoDB, JWT, IGDB API, Jest, Vercel

- **Built** a full-stack discovery platform using live IGDB data, JWT authentication, favorites, wishlists, and fuzzy title matching; added 105 automated tests with GitHub Actions CI and deployed on Vercel.

Online Auction System | Java, Swing, JUnit 5 2025

- **Automated** core bidding and auction lifecycle tests using JUnit 5 and applied Strategy, Observer, and Template Method design patterns.

CERTIFICATIONS

Interactive Programming in Python - Rice University (Coursera)
Computational Thinking for Problem Solving - University of Pennsylvania (Coursera)
Business Intelligence and Data Warehousing - UNAM (Coursera) | May 2026
